

Real-Time Fraud IP Intelligence for Local Deployment

Anura IPDB is a downloadable IP database designed to help businesses quickly identify and block high-risk traffic before it reaches critical systems.

Built from the same fraud detection intelligence that powers Anura Script and Anura Direct, Anura IPDB gives organizations access to a high-performance, locally installed dataset that can be queried directly within their own environment.

| IP ADDRESS | RESULT |
|----------------|---|
| 66.249.80.238 |  Suspect |
| 104.172.8.201 |  Non-Suspect |
| 44.255.200.94 |  Suspect |
| 74.125.212.172 |  Suspect |
| 98.225.87.154 |  Non-Suspect |
| 54.71.187.124 |  Suspect |

What's Included

Anura IPDB contains IPs that are known to be associated with:

- ▶ Datacenter traffic commonly used to mask fraudulent activity.
- ▶ Proxy services tied to compromised devices or abusive behavior.
- ▶ IPs identified by Anura's data as being used for the sole purpose of committing fraud.
- ▶ Other known sources of invalid and high-risk traffic.

Key Benefits

Unlimited Queries for a Flat Rate

No usage caps. No per-query fees. Anura IPDB is flat-rate priced, giving you the ability to run unlimited queries without worrying about volume-based pricing.

Extremely Fast Response Times

Because the database is installed locally on your servers, lookup times are typically around 1 millisecond, making it ideal for real-time decisioning environments.

Local Control

Anura IPDB™ is deployed directly within your infrastructure, allowing your systems to query the database locally for speed and operational control.

Important Considerations

No Hosted Analytics or Data Aggregation

Since Anura IPDB is a locally installed service, Anura does not aggregate query data or provide additional client analytics through this product. This offering is designed specifically for organizations that want fast, direct access to the data within their own environment.

Frequent Updates Recommended

Anura's fraud intelligence updates in real-time, which means a downloaded IP list can become outdated quickly. To maintain the highest level of accuracy, Anura recommends downloading the updated file every hour to keep your data as current as possible.

Best Fit For

Anura IPDB is ideal for organizations that need:

- ▶ Fast local IP reputation lookups.
- ▶ Unlimited query capability.
- ▶ A simple flat-rate pricing model.
- ▶ Fraud IP intelligence without sending query traffic to a third party.

Why Anura

Anura is trusted by organizations that need highly accurate fraud detection backed by real data. With Anura IPDB, you get access to a continuously updated intelligence set built from the same fraud insights that power Anura's broader detection capabilities.
